

Regional Sales Analysis – Tableau Project

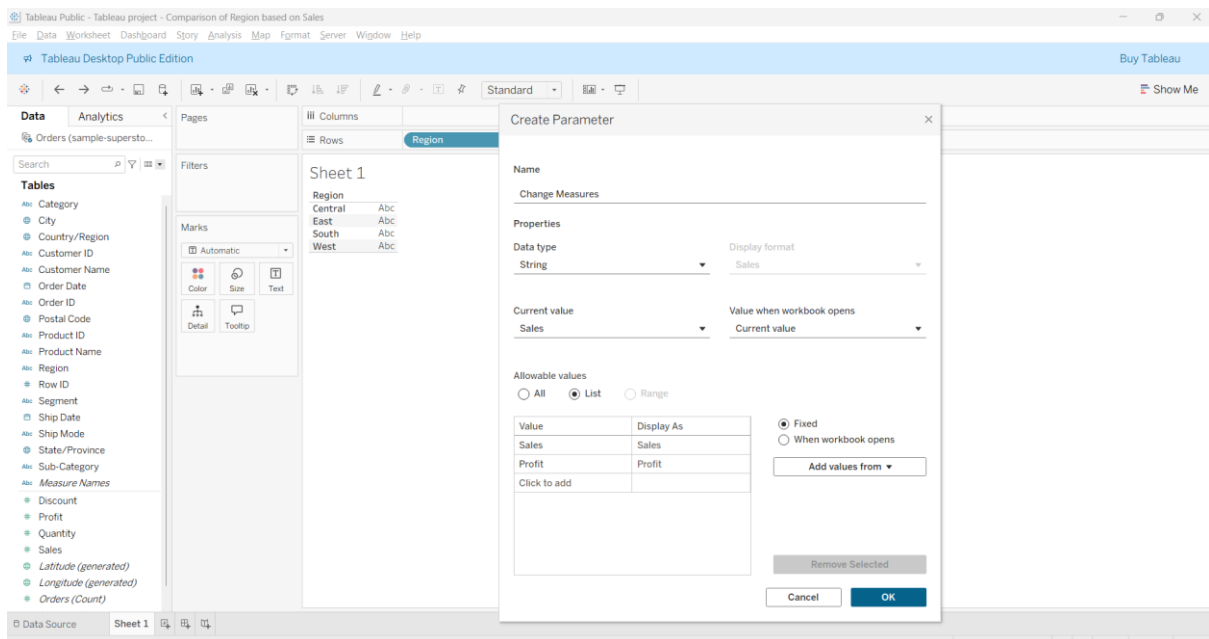

1. Introduction

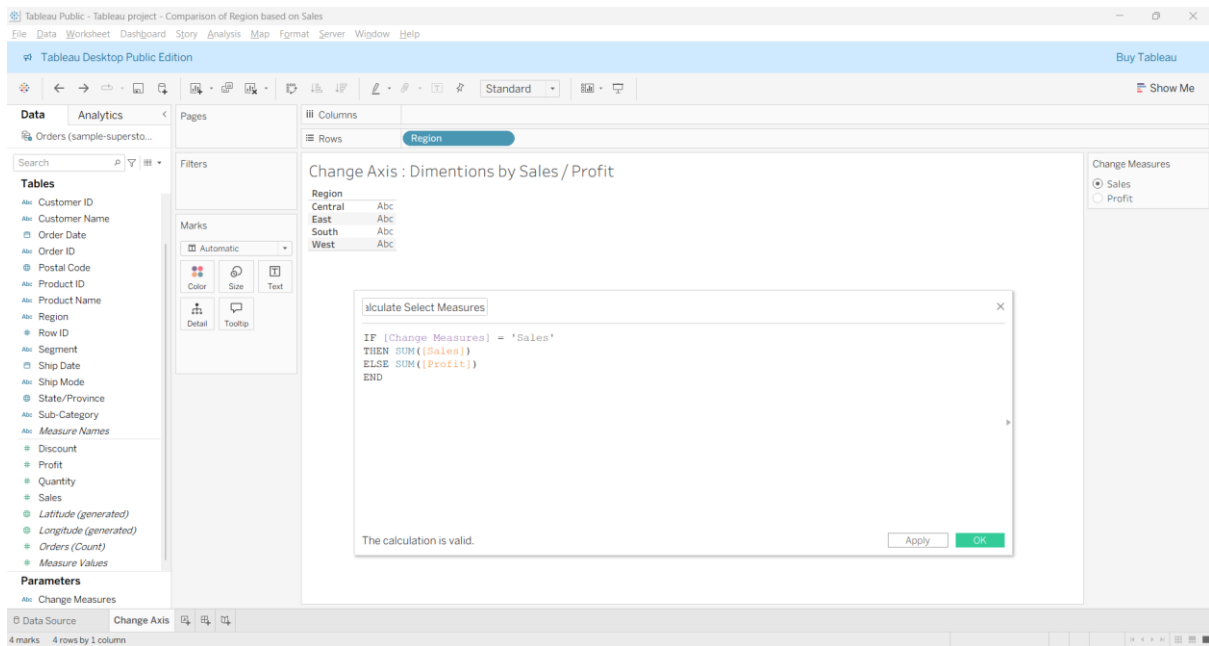

This project aims to analyse and compare the sales performance of two selected regions using Tableau. The dashboard highlights regional trends, KPIs, and areas for improvement, providing actionable insights for management to make informed decisions.

2. Step-by-Step Process

Step 1: Created Parameter for X-Axis

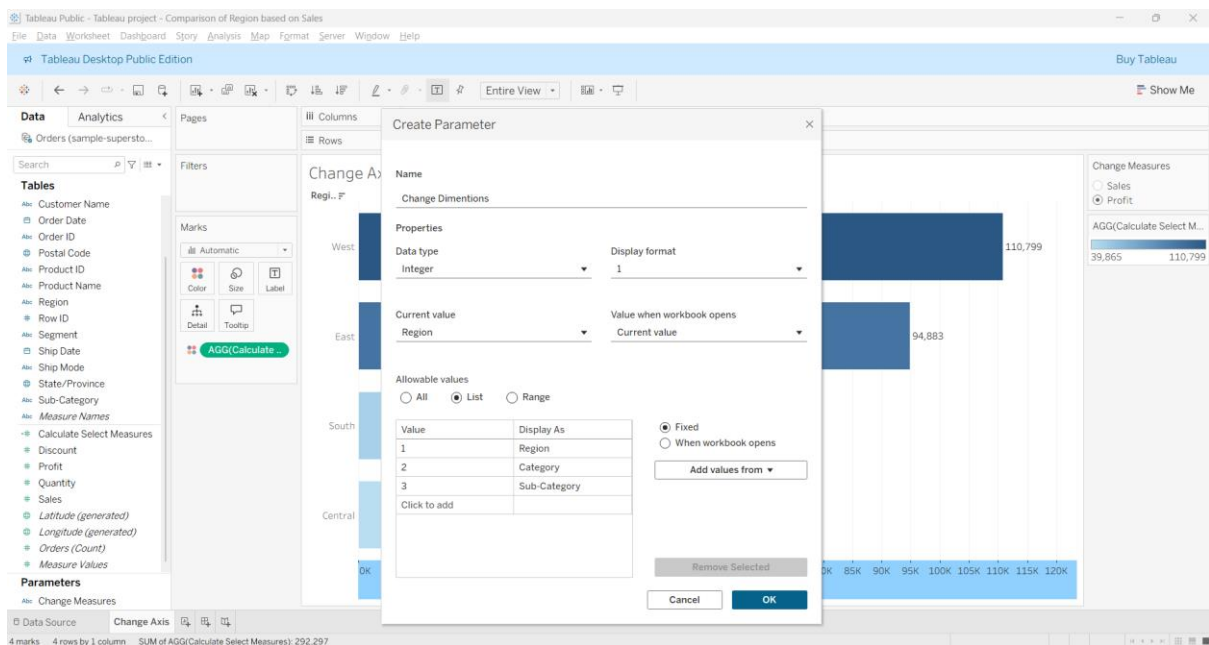

- **Action:** Created a parameter to allow users to switch between different measures on the X-axis.
- **Supporting Work:** Added calculated field linked to this parameter.
- **Value:** Provides flexibility in analysis by enabling measure comparison dynamically.

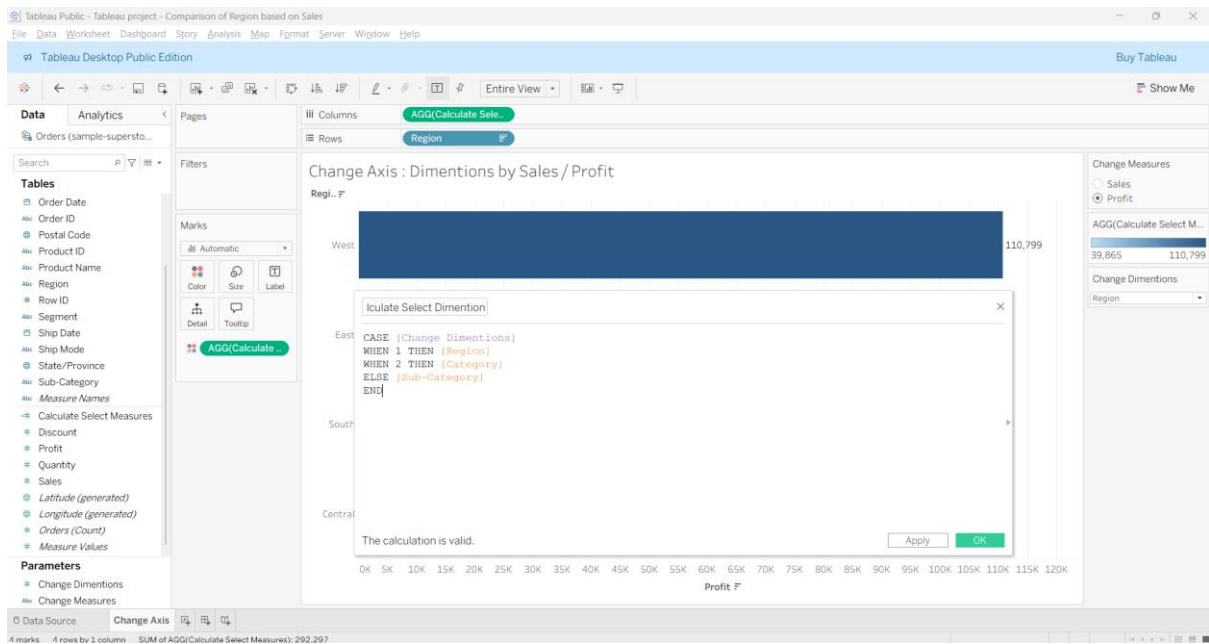

Step 2: Created Parameter for Y-Axis

- **Action:** Created a parameter to allow switching between dimensions for the Y-axis.
- **Supporting Work:** Replaced it with region field in visualizations.
- **Value:** Allows dynamic analysis between different regional categories.

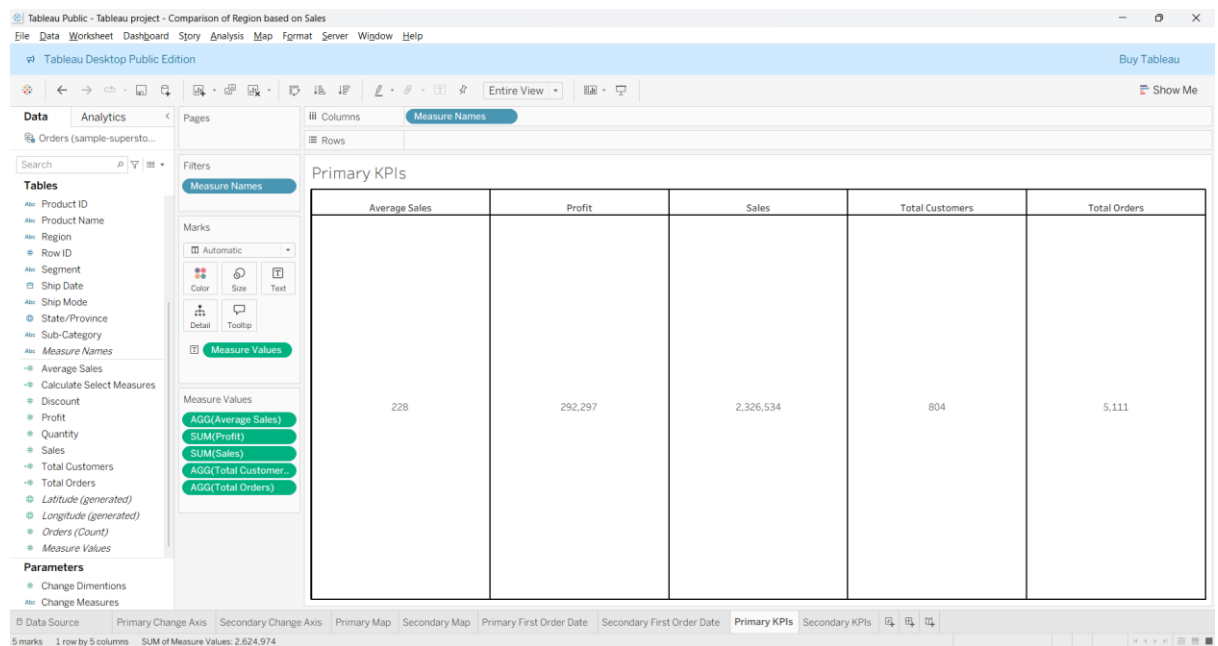

Step 3: Created KPIs and Calculated Fields

KPIs included:

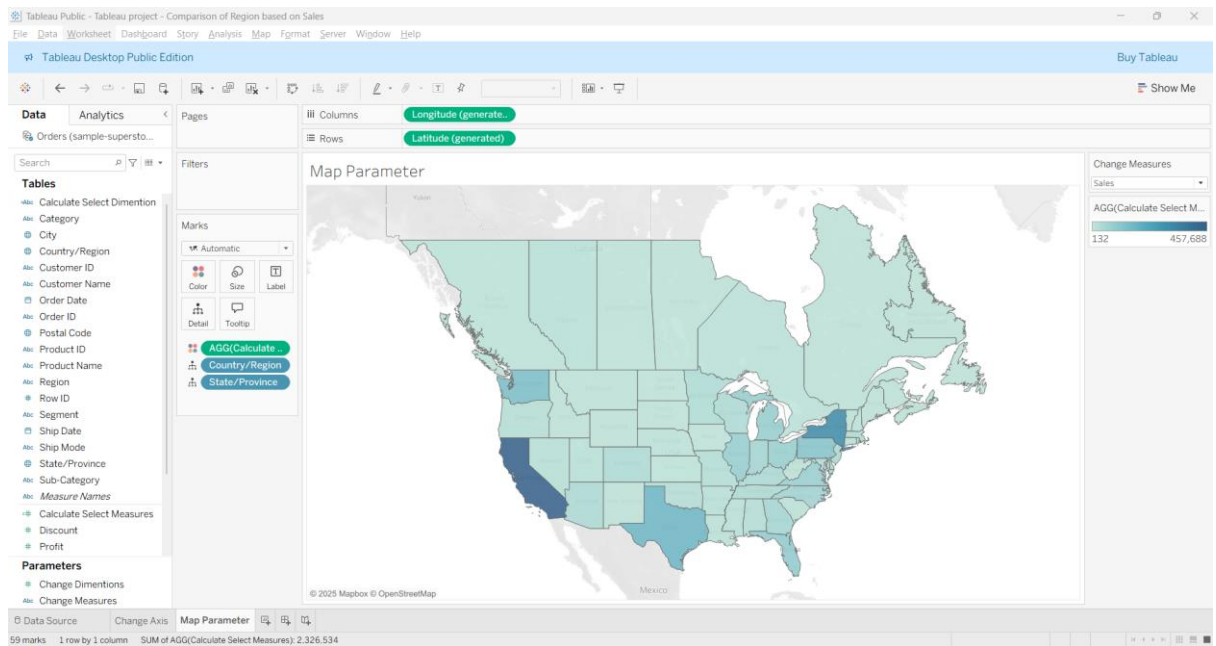

- Total Sales = SUM([Sales])
- Profit = SUM([Profit])
- Total Orders = COUNTD([Order ID])
- Total Customers = COUNTD([Customer ID])
- Average Sales = AVG([Sales])

Value: KPIs provide an executive snapshot for quick decision-making.

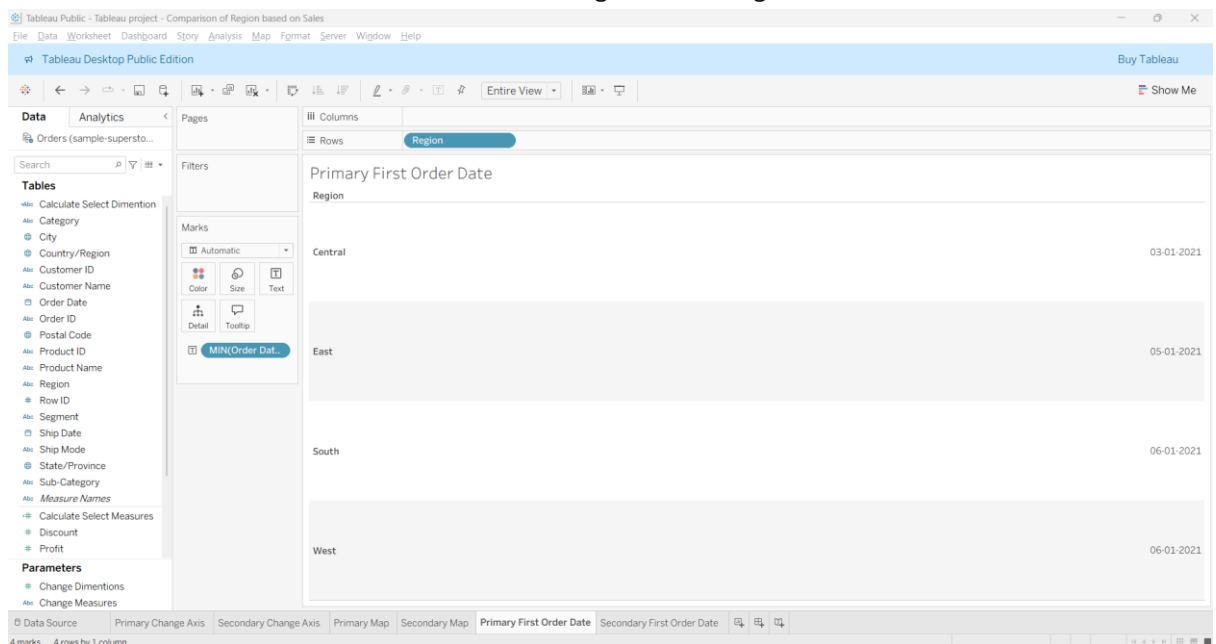

Step 4: Visualization Creation for Comparison of (Primary and Secondary)

- **Map View** – Geographical distribution of sales.

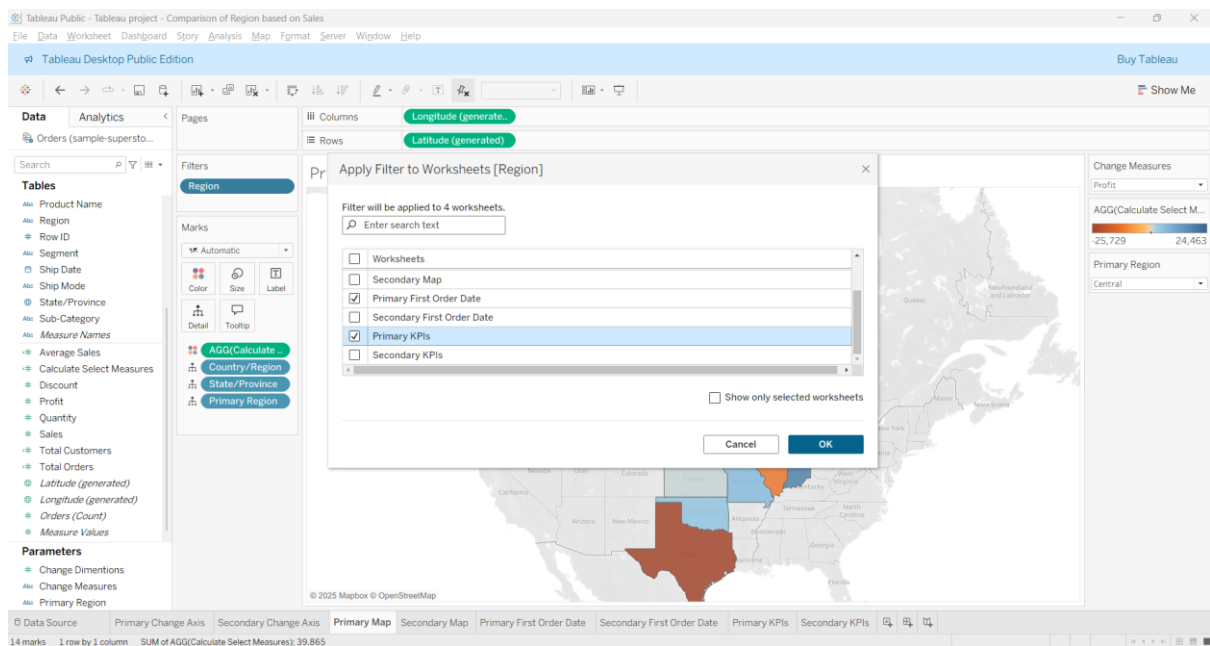

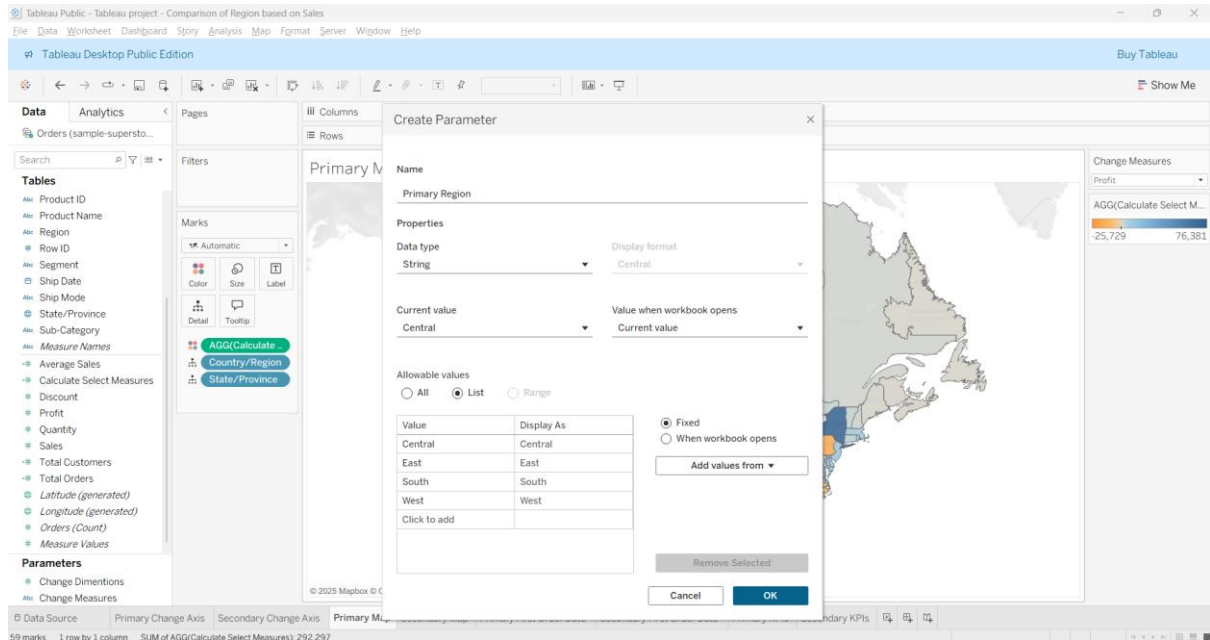

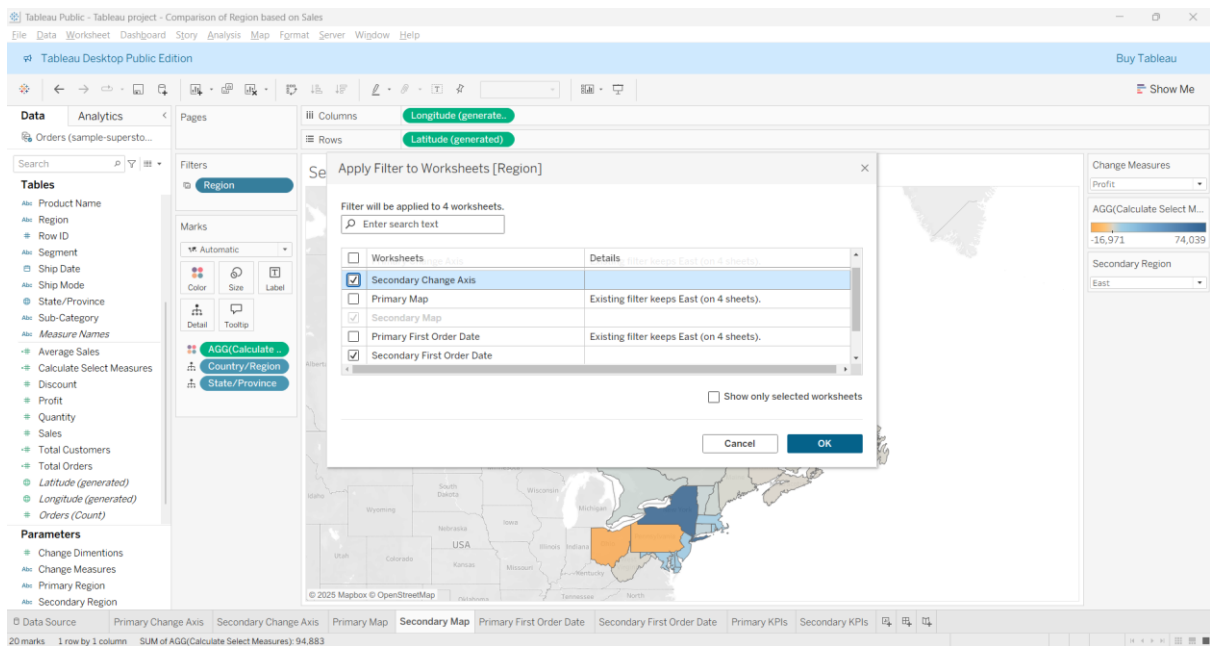

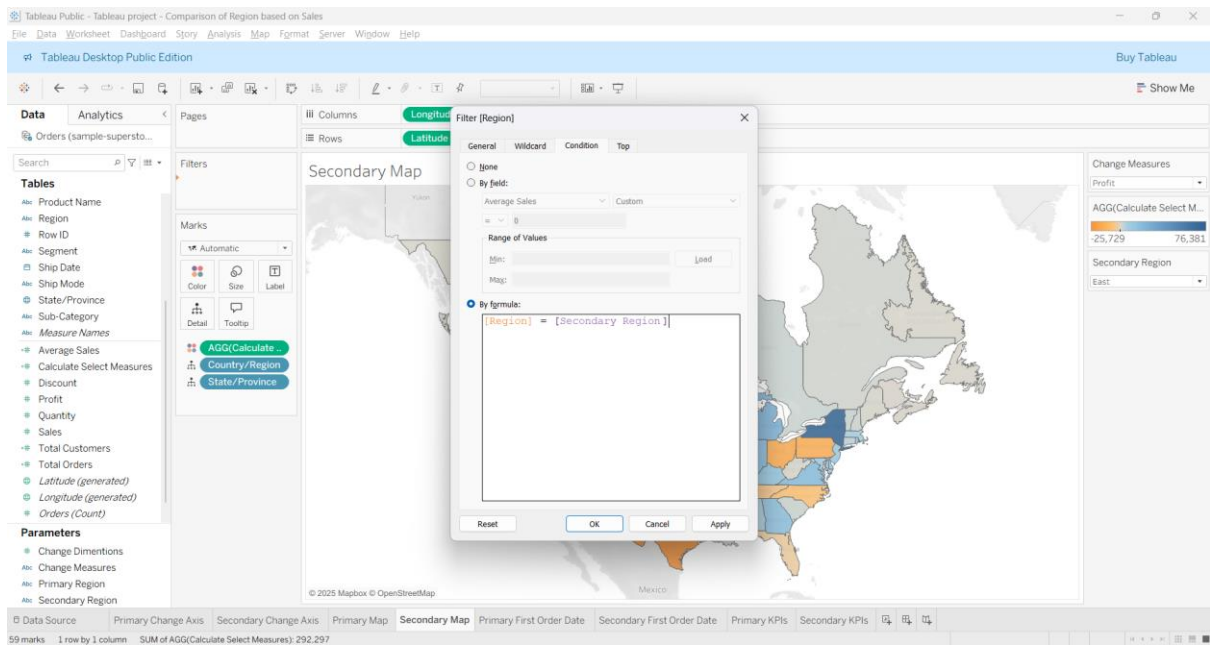

- **First Order Date View** – Timeline of when orders began in each region.

Step 5: Regional Filters (Parameters for Primary & Secondary Regions)

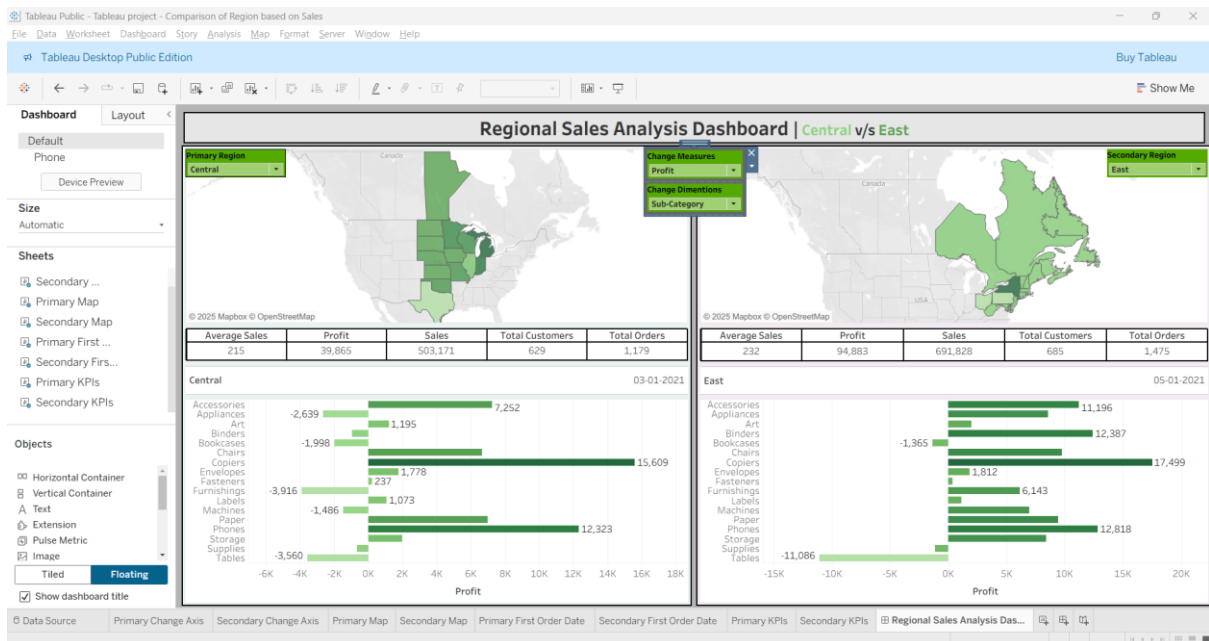

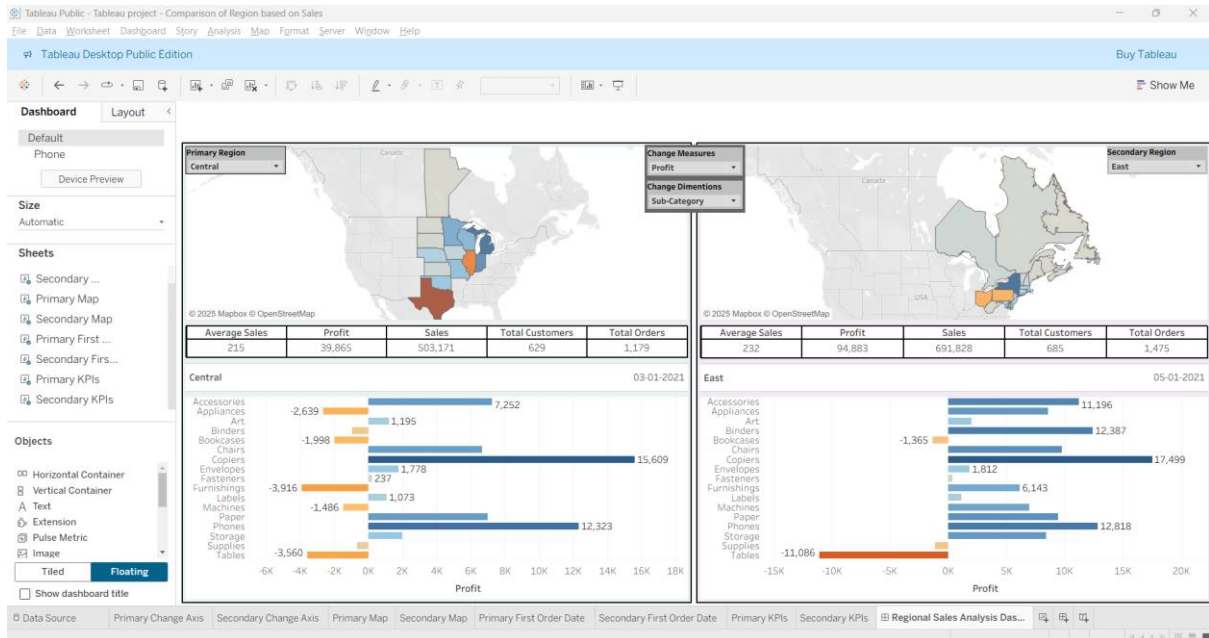

- **Action:** Created Primary and Secondary Region parameters.
- Applied filters across worksheets to dynamically update views.
- **Value:** Enables side-by-side comparison between two selected regions.

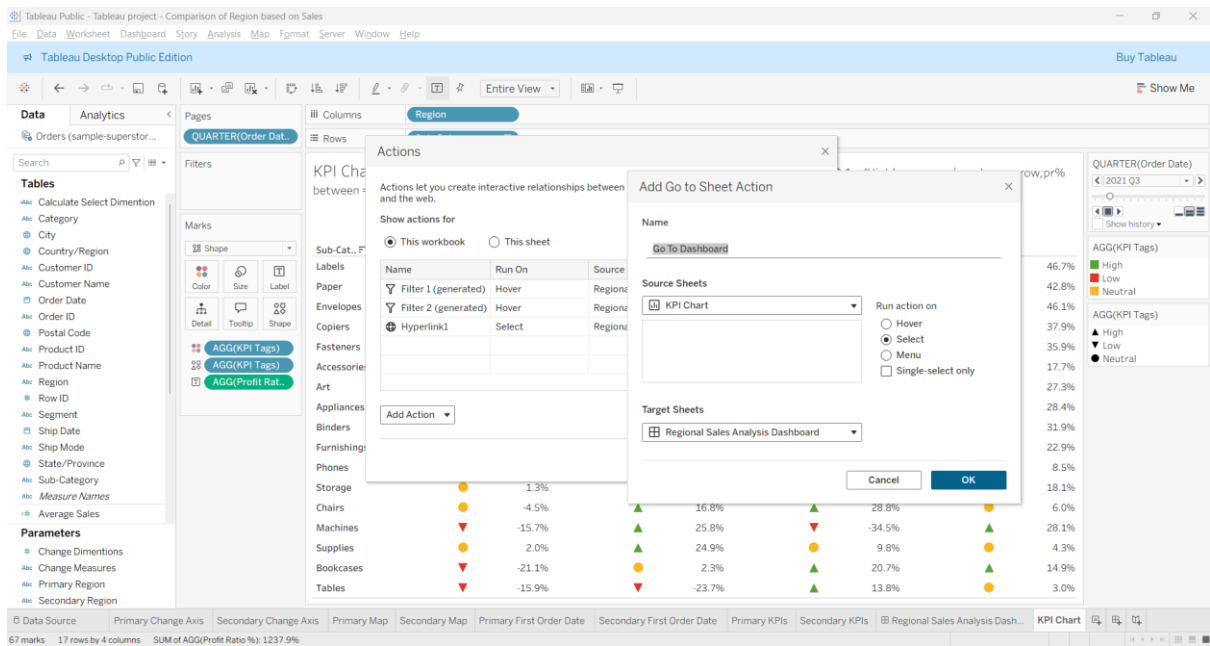

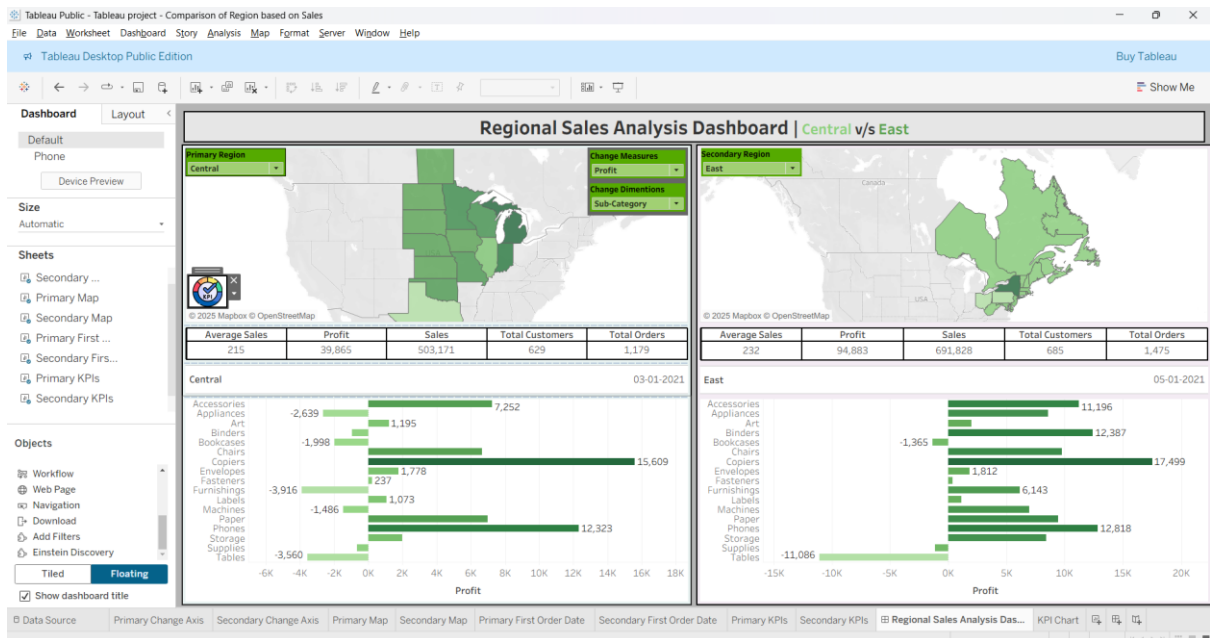

Step 6: Created KPIs and Calculated Fields

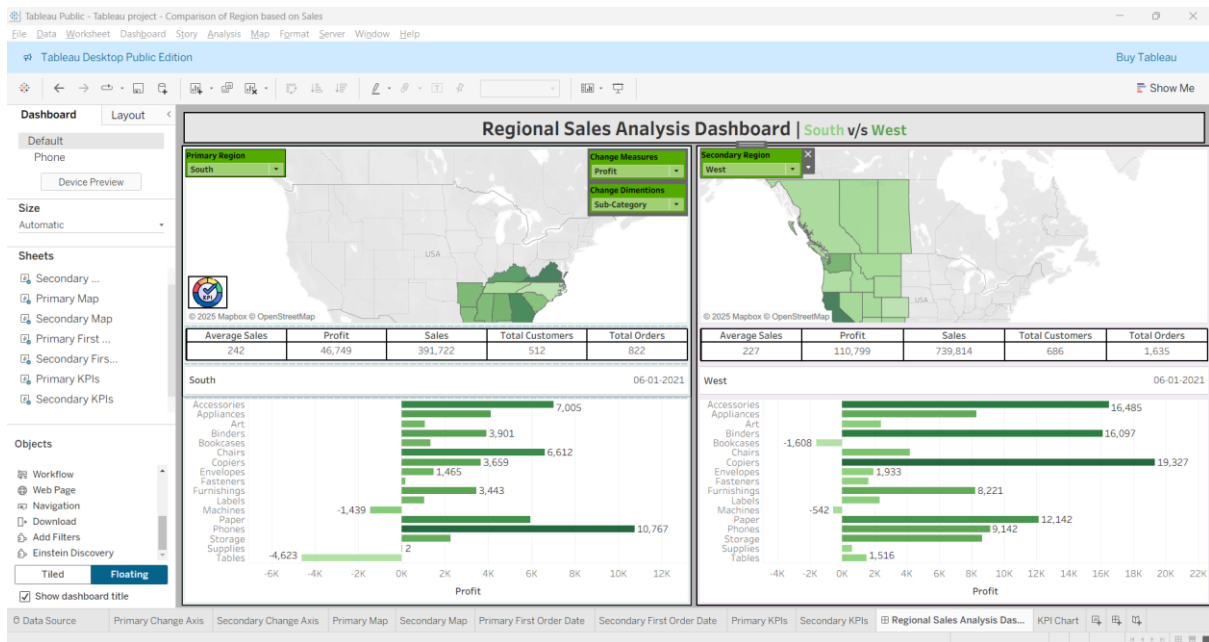

- Created containers for **Primary** and **Secondary** regions.
- Added charts, legends, and formatted titles for clarity.
- Included interactive filters for region, measure, and dimension selection.
- Added **hover filter actions** and **navigation actions** between KPI sheet and dashboard.

- Final dashboard screenshots here – Central vs East, South vs West

3. Actionable Insights

Based on the analysis, here are the key findings:

Central vs East

- **Sales & Orders:** Central shows higher overall sales compared to East. However, East demonstrates better efficiency in sales per order (leaning towards higher-value transactions).
- **Customer Base:** Central appears to reach a wider customer base, while East benefits from repeat orders with stronger per-customer value.
- **Product Mix:**

Central's sales are heavily driven by Furniture.

East shows strength in Technology products, giving it a more diversified sales mix.

- **Profitability:** Central achieves greater revenue, but East maintains higher profit margins, meaning East is more efficient at converting sales into profit.

South vs West

- **Sales & Orders:** West clearly outperforms South in overall sales. South, however, records a slightly higher average sales per order, reflecting more valuable individual orders.
- **Customer Base:** West attracts a larger customer base, whereas South penetrates deeper into fewer customers, leading to strong per-customer engagement.
- **Product Mix:**

South is stronger in Office Supplies.

West leads in both Technology and Furniture categories, showing balanced strength across segments.

- **Profitability:** Despite South's lower total revenue, its profit ratio is competitive with West, suggesting higher efficiency per sale.

4. Conclusion

The Tableau dashboard successfully compares regional sales performance through dynamic parameters, KPIs, maps, and interactive charts. It allows management to:

- Identify top-performing regions.
- Recognize improvement areas.
- Align sales strategies to boost efficiency and profitability.
